

Agent44**Labs**

NY Kitchen

How to use your workspace

A simple, friendly tour of the agent helpers in your NY Kitchen workspace: the class list, recipes and handouts, pull sheets, and groceries.

CONTENTS

What is in this guide

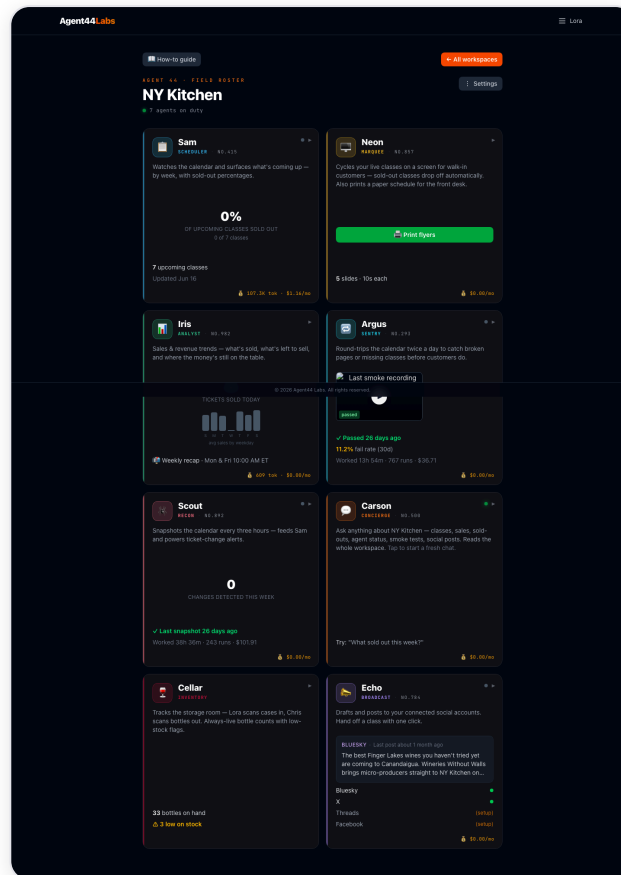

Each agent has its own page. Everyone on the team can use these.

1	Getting in & your workspace	your home screen
2	The List (Sam): your week at a glance	classes & sales
3	Recipes	build a handout
4	Editing a handout, AI revise & printing	the editor
5	Grocery list & receipts	shopping

1 — GETTING IN

Your NY Kitchen workspace

After you sign in at **agent44labs.com** and open NY Kitchen, you land on your workspace. Every agent is a card, and the ones you open most float to the top.

Your workspace. Each card is one agent: Sam the list, Neon the display, Echo for social, and more.

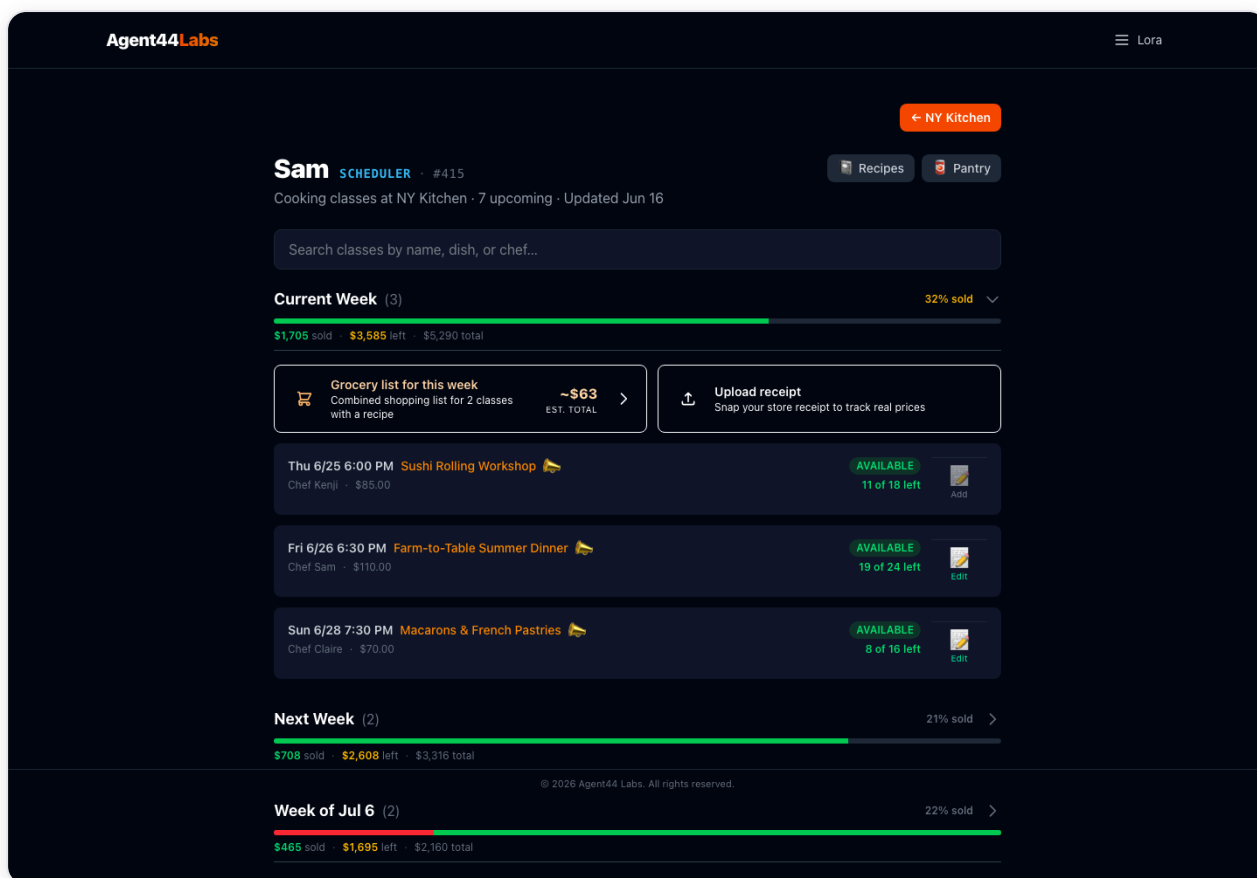

HOW TO GET HERE

- 1 Open the app (or go to agent44labs.com) and sign in with your email. We send a 6-digit code, so there is no password to remember.
- 2 Tap **NY Kitchen** to open your workspace.
- 3 Tap any card to open that agent. The **NY Kitchen** button (top right on every page) brings you back here.

Tip: The cards reorder themselves to float your most-used agents to the top, so your workspace may look a little different from a teammate's. You can grab this guide any time from the **How-to guide** link at the top of your workspace.

Your week at a glance

The List shows every upcoming class, grouped by week, with how well each is selling. This is the page most people open first thing.

A week opened up: each class shows the time, chef, price, seats left, and quick buttons.

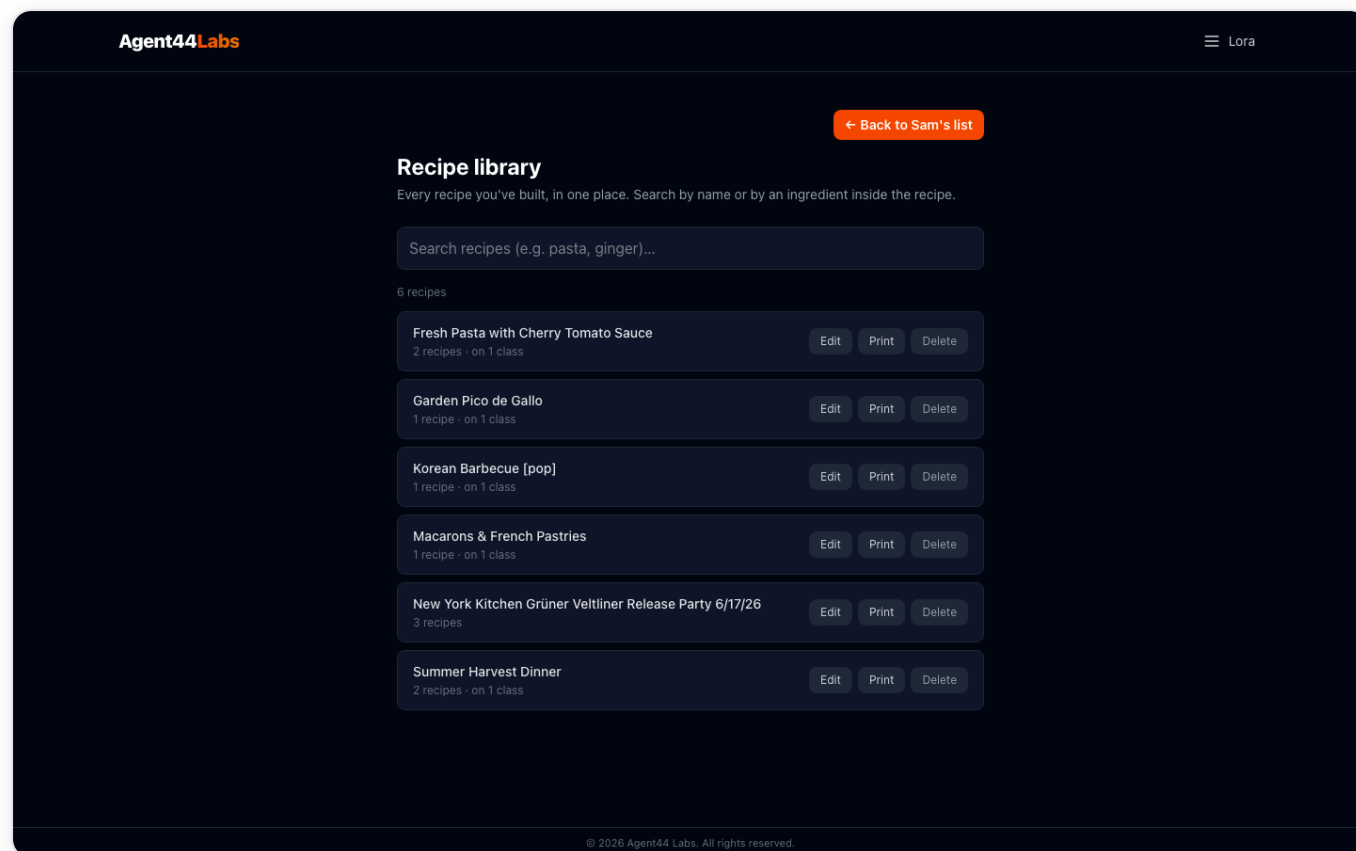

WHAT YOU CAN DO

- 1 Tap a week (like **Current Week**) to open or close its classes. The colored bar shows how much of that week is sold.
- 2 Use the **search box** to jump to a class by name, dish, or chef.
- 3 Tap the small 📣 next to a class name to draft a social post promoting it.
- 4 On the right of each class, tap **Add** or **Edit** to create or open that class's **handout** (recipes, printing, and its pull sheet all live there).
- 5 Tap the orange **Grocery list** card for the week's combined shopping list, or **Upload receipt** to track real prices.

Good to know: Dollar amounts (sold, left, total) are shown to owners and managers.

Recipes

The Recipe Library is where you browse and search every **handout** you have built (a handout is the printable packet for a class, and it can hold more than one recipe). You make a new one from a class on Sam's list (tap **Add**); it then shows up here to reuse, edit, print, or delete.

The Recipe Library. Search by class name or by an ingredient inside a recipe, and Edit, Print, or Delete each handout.

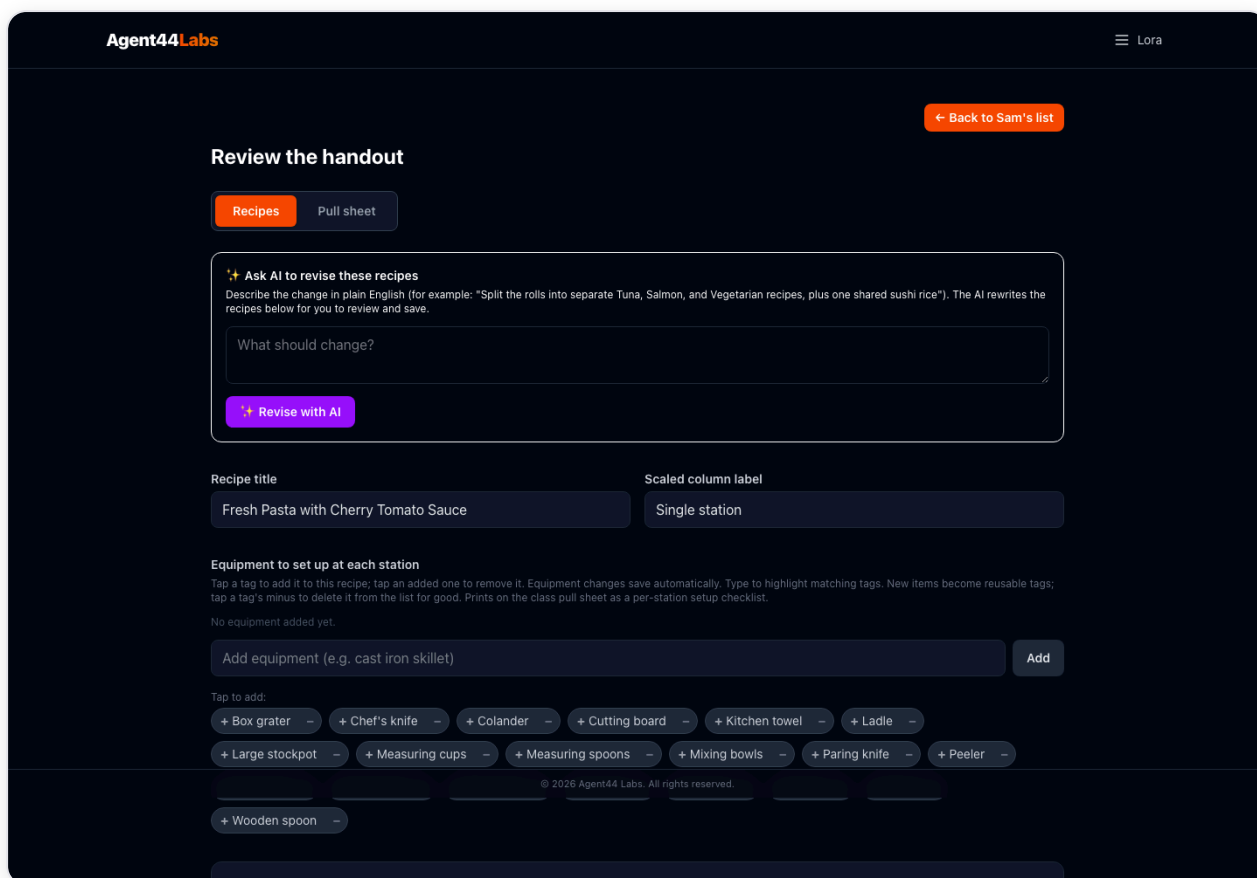

FIVE WAYS TO BUILD A HANDOUT (AFTER YOU TAP ADD ON A CLASS)

- **Upload a PDF** of a recipe and the assistant reads the ingredients and steps for you.
- **Paste a web link** to a recipe page and it pulls the details.
- **Paste the text** of a recipe straight in.
- **Generate from the class name** when you have no document yet, it drafts a starting recipe.
- **Copy an existing recipe:** under "Or copy an existing recipe", search your built recipes and tap **Copy** to start from one you already have. Your edits stay on the new class; the original is untouched. Great for repeat classes.

Tip: the copy search filters as you type, by recipe name or by an ingredient inside it, just like the class list.

Edit, revise with AI, and print

Open a handout to fine-tune its recipes, ask the assistant to rework them, and print a clean branded handout for the class. Two tabs: **Recipes** (what you edit here) and **Pull sheet**.

The top of the editor: the Recipes/Pull sheet tabs, the AI revise box, the title and station label, and equipment. Ingredient amounts and a live PDF preview are further down.

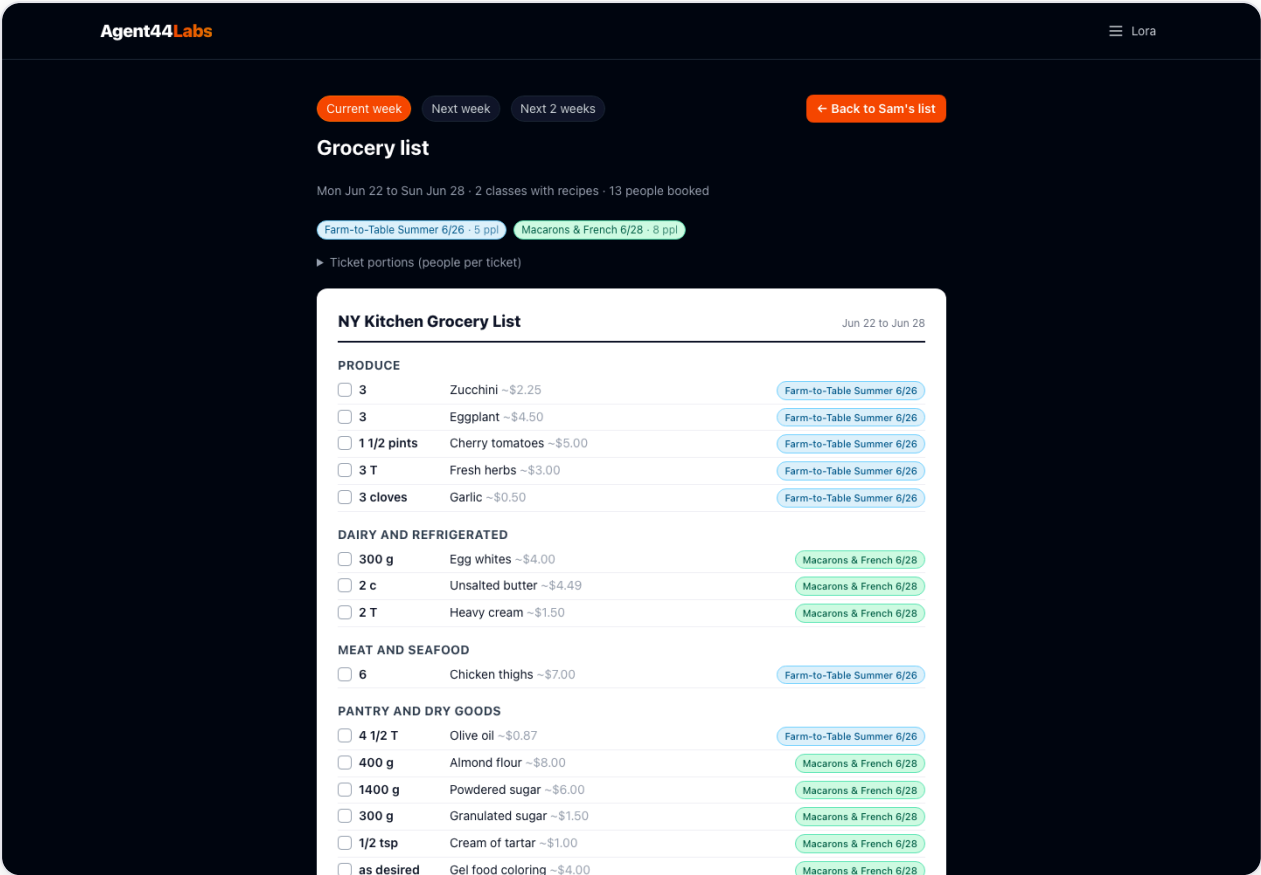

WHAT YOU CAN DO

- 1 Edit the **title**, ingredient amounts, and directions directly. Each recipe shows a full-batch amount and a per-station amount.
- 2 In **Ask AI to revise**, type a quick instruction (for example, "split the rolls into Tuna, Salmon, and Vegetarian") and tap **Review with AI**.
- 3 Add or remove **equipment** tags, then tap **Save & refresh preview** to update the PDF.
- 4 Tap **Print handout** for the branded printout. Pages are labeled **Dual station** (full batch) and **Single station** (half).
- 5 Switch to the **Pull sheet** tab for that class's setup sheet (the shopping list plus the per-station equipment checklist), and tap **Print** to print it. (It appears once the recipe is attached to a class. On the iPad or iPhone app the sheet opens in Safari to print.)

Headcount: When a class teaches several dishes, each recipe can carry its own headcount, so the amounts scale correctly.

Grocery list & receipts

The Grocery list combines every class that has a recipe into one shopping list, scaled to how many people are booked, so you buy the right amount.

A week's combined list, grouped by aisle (produce, dairy, meat, and more), with an estimated total at the bottom.

WHAT YOU CAN DO

- 1 Pick a range with the pills: **Current week**, **Next week**, or **Next 2 weeks**. (A single class's "Pull Sheet" opens here too.)
- 2 Read the combined list. Each ingredient is added up across all the classes in the range.
- 3 Print or download the list for the store.
- 4 After shopping, upload your receipt so the next estimate uses real prices.

Why the total may be blank at first: The estimated total appears once you have opened that week's grocery list once. After that it shows on the orange card on the List page.

NEED A HAND?

That's the tour

You now know the everyday agents in your NY Kitchen workspace. A quick recap of the daily rhythm:

- **Morning:** open **Sam** (the List) to see the week and what needs attention.
- **Prep:** attach **recipes** to classes and print the handouts.
- **Shop:** pull the **grocery list** for the week, and upload your receipt after shopping.
